When the report for Julia Gillard goes home to her mum and dad, what will it say? Here’s a sneak peak at its probable contents.

Julia has had a very busy year, not least in providing substantial help for those in the primary years, where she has shown a surprising interest in school buildings. She has steered a Council of Australian Governments national education agreement to address some critical policy areas such as Year 12 or equivalent retention; literacy and numeracy; Indigenous educational disadvantage; successful post-school transition; and the collection of nationally-consistent data and information to be used for reporting on agreed educational outcomes, including student and school reports. While her effort in these areas is commendable, it is likely that she still has some way to go if she wishes to achieve her goals.

This is also the case for her involvement in the provision of 1:1 laptops, and the infrastructure to support this initiative. It is pleasing to observe that Julia has excellent listening skills, is always polite and cooperative, and is extremely well organised.

On the whole, Julia is making excellent progress and should continue to show good progress if she employs her undoubted skills to full effect.

Given her existing workload, Julia has also done a fair amount of work through her extra-curricular involvement in reforms to workplace relations. Looking to next year, Julia would do well to consult widely if she is to implement a national curriculum and if she is successfully to tackle reform to school funding arrangements beyond the 2009 to 2012 quadrennium.

**FAST FACTS**
